FOR SUSTAINABLE INFRASTRUCTURE

RESEARCH

INTEGRATED CLIMATE-BIODIVERSITY ACTION AT THE PROJECT LEVEL

Prof. S.N. Pollalis

June 15, 2022

2020-2021 RESEARCH

Assessment of Projects for
a. **mitigation and adaptation to climate change** and
b. attractiveness to investors

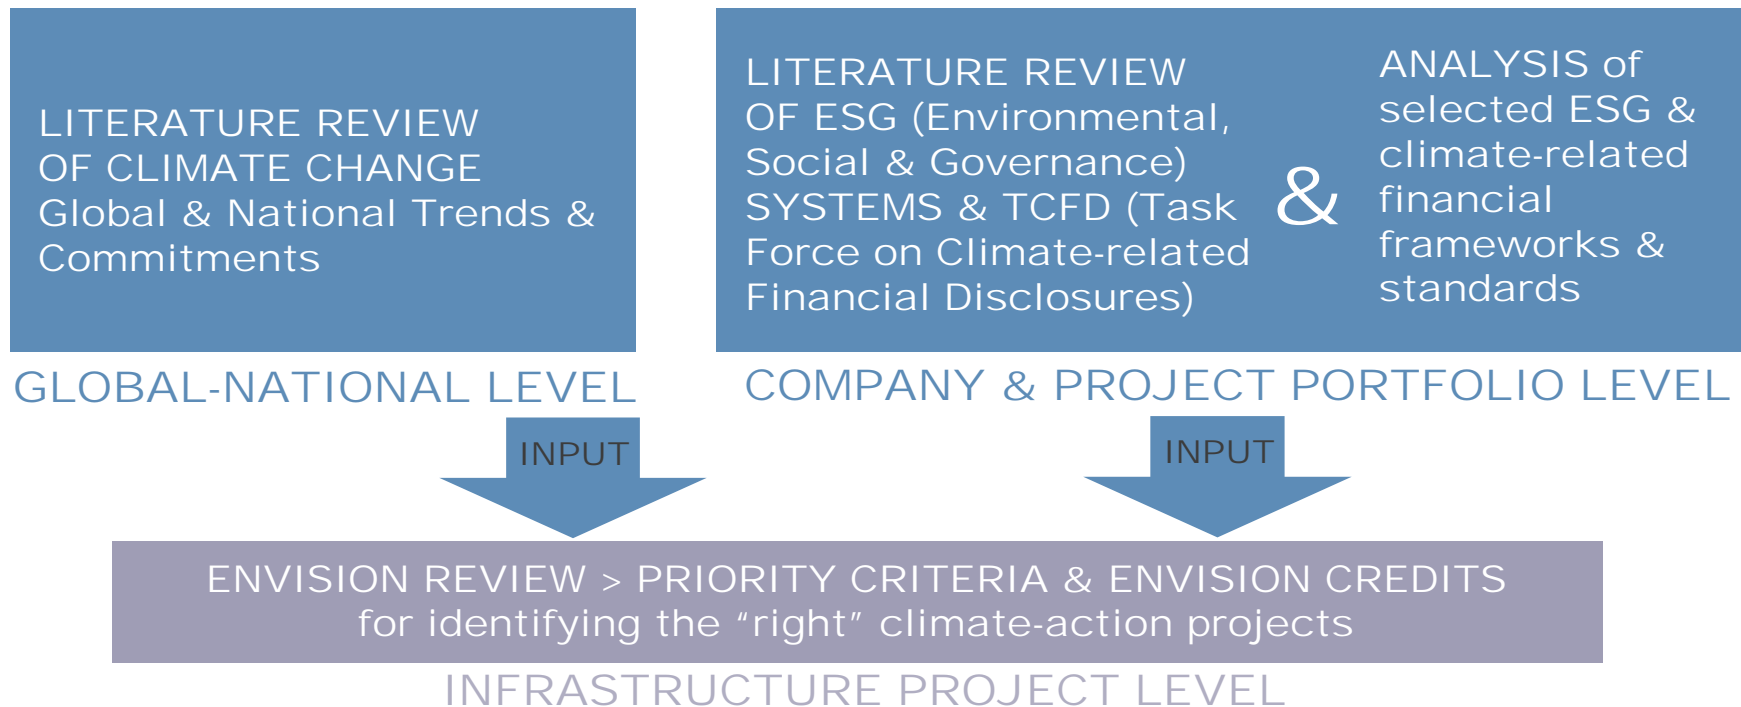

2021-2022 RESEARCH

Assessment of Projects for
a. **integrated climate-biodiversity action** and
b. attractiveness to investors

FROM GLOBAL TO THE PROJECT LEVEL

Climate change is a global issue

This research bridges performance criteria of global, national, sector, company,
with criteria at the project level based on Envision®.

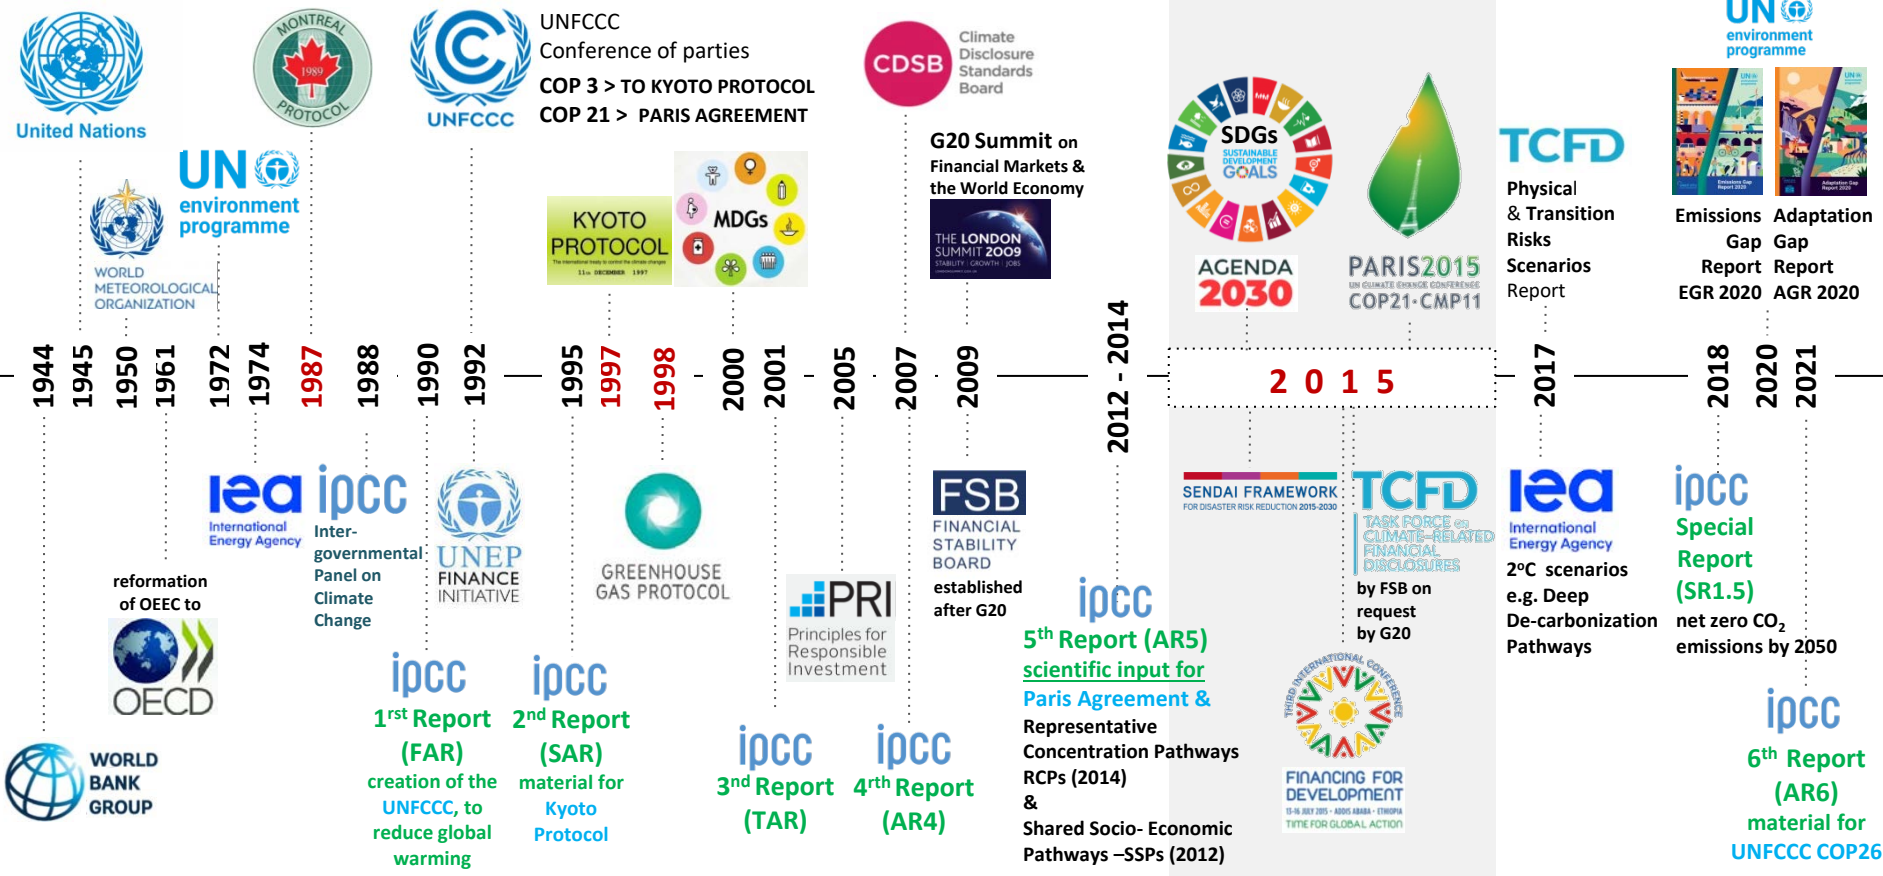

The presentation structure is based on the levels relevant to climate change action

Climate change action

GLOBAL - NATIONAL
LEVEL

COMPANY &
PROJECT PORTFOLIO
LEVEL

INFRASTRUCTURE
PROJECT LEVEL
BASED ON ENVISION

THE PARIS AGREEMENT & NET ZERO EMISSIONS BY 2050

1. Cut GHG emissions to keep a global average temperature rise this century well below 2°C above pre-industrial levels, and preferably below 1.5°C.

PARIS2015
UN CLIMATE CHANGE CONFERENCE
COP21-CMP11

2. A global goal to reach net zero emissions by 2050.

Net-zero emissions will be achieved when all GHG emissions released by humans are counterbalanced by removing GHGs from the atmosphere in a process known as ‘carbon removal’. Reaching net-zero emissions is akin to achieving "climate neutrality."

'Net-zero CO₂ emissions' are achieved when anthropogenic CO₂ emissions are balanced globally by anthropogenic CO₂ removal. **Net zero CO₂ emissions are also referred to as "carbon neutrality."**

Global timeline to reach net-zero emissions

There is now scientific consensus that global emissions must drop by 50% over the next decade for the world to have a chance of staying at 1.5°C of global warming and avoid the most catastrophic consequences of climate change. It has clear and immediate implications for businesses.”

EU Technical Expert Group on Sustainable Finance, Taxonomy: Final report of the Technical Expert Group on Sustainable Finance (March 2020)

Of the 17 SDGs (Sustainable Development Goals), the SDG combating climate change –SDG 13 ‘CLIMATE ACTION’– has been identified as the most pressing, after adopting the UN Paris Climate Change Agreement.

17 SDGs

AGENDA 2030

‘GHG accounting,’ defined by the Greenhouse Gas Protocol, is a global standardized tool for measuring progress against GHG reduction targets

Scope 1, 2 and 3 emissions

- a. assist in creating inventories to estimate the GHG emissions of companies
- b. monitor GHG emissions evolution in the long term
- c. allow for aggregation and comparability

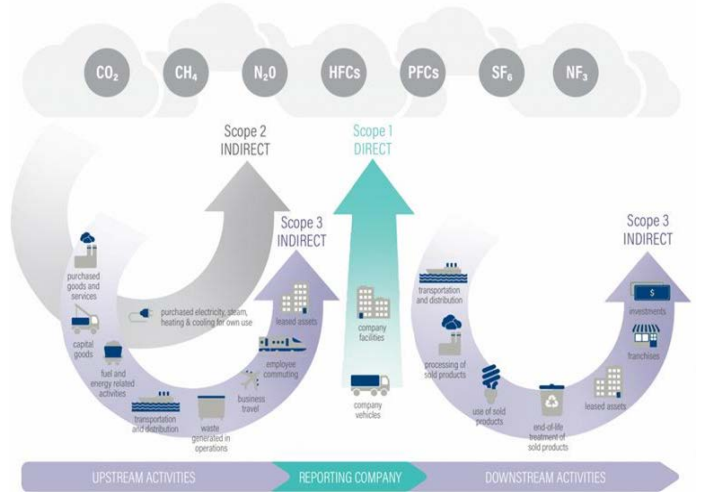

Image source: Greenhouse Gas Protocol, World Resources Institute WRI

Scope 1 emissions

- **Direct** emissions from sources the company owns or controls
- Mandatory accounting and reporting

Scope 2 emissions

- **Indirect** GHG emissions from the generation of purchased energy (electricity, steam, or heat) consumed by the facilities or equipment that the company owns or controls
- Mandatory accounting and reporting

Scope 3 emissions

- **Indirect** GHG emissions from other sources the **company does not own** or control (e.g., waste disposal, outsourced activities, or emissions related to employee commuting) that occur in a company’s value chain
- The largest source of emissions for companies and thus significant opportunities for GHG reductions
- Optional accounting

Environmental, Social, and Governance (ESG) reporting is a tool for investors to know the sustainability performance of their investments

Non-Financial reporting (or sustainability disclosure, or ESG reporting)

KEY ACTORS

					
CARBON DISCLOSURE PROJECT	CLIMATE DISCLOSURE STANDARDS BOARD	GLOBAL REPORTING INITIATIVE	SUSTAINABILITY ACCOUNTING STANDARDS BOARD	INTERNATIONAL INTEGRATED REPORTING COUNCIL	GLOBAL REAL ESTATE SUSTAINABILITY BENCHMARK

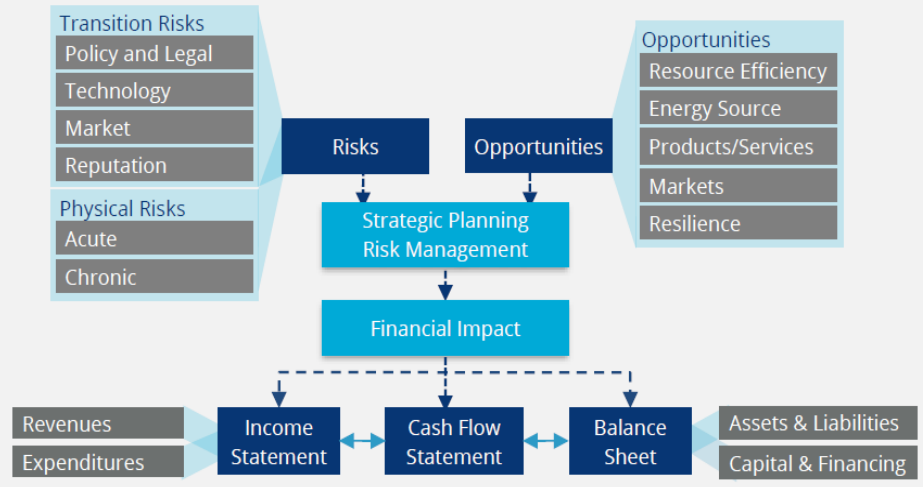

“Corporate reporting is a means by which stakeholders, **including investors**, can understand and evaluate companies’ performance, in the same way companies use information internally to inform decision-making.”

” 5ISS (Five Institutional Shareholder Services) Statement of intent to work together

The investor’s demand for climate action has been largely driven by TCFD, a catalyst for awareness of **climate change as a financial risk**

Climate-Related Risks, Opportunities, and Financial Impact

Climate-related risks are divided in two major categories:

- **Transition risks:** related to the transition to a lower-carbon economy, which affects most economic sectors and industries.
- **Physical risks:** related to the physical impacts of climate change; event driven (acute) or longer-term shifts (chronic) in climate patterns

” Recommendations of the Task Force on Climate-related disclosures (June 2017)

ESG investing

ESG is about risk-based investing. ESG systems evaluate, in equal measure, the potential risks and drivers of long-term enterprise value, and assess whether those risks are priced in.

SDG investing

The shift from ESG to SDG investing showcases a trend of moving from a company agenda to a global agenda. The SDGs provide a common language; however, no standardized system exists for reporting progress against SDGs and their targets.

TCFD Alignment of ESG Systems

TCFD alignment is investors' explicit request for "international standard-setting bodies to incorporate the TCFD recommendations into their standards."

The Climate-first Approach

Major ESG organizations have prioritized an early consideration of climate-related information, a "climate-first" approach to respond to global action urgency.

Biodiversity crisis

Though it is a still-nascent ESG consideration for investors, the biodiversity crisis is climbing up investors' agenda as the next priority, mainly for its nexus with climate.

(studied as part of the research focus for 2021-22)

The interconnection of action at Global-National-Company levels

The literature review, the analysis of TCFD and selected ESG systems identified 'HIGH- PRIORITY CRITERIA' for assessing the company's performance in climate change mitigation & adaptation

1 assessment of transition risks (mitigation)

A. GHG emissions reduction targets & progress against targets (GHG accounting)

- GHG Scope 1 emissions
- GHG Scope 2 emissions
- GHG Scope 3 emissions
- GHG Scope 3 emissions (user)

B. GHG emissions reduction strategies

1. Energy efficiency
2. Electricity decarbonization using renewable energy sources
3. Electrification (replacement of use of fossil fuels with electricity)
4. Carbon capture and sequestration for the hard-to-electrify portions of systems

2 assessment of physical risks (adaptation)

C. Alignment with TCFD recommended disclosures

1. Report risk evaluation process
2. Report risk management process

D. Exposure to climate-related risks

1. service continuity risk
2. physical asset risk
3. resource availability risk
 - water
 - materials
 - land
 - workforce
4. supply chain continuity risk

GLOBAL -
NATIONAL
LEVEL

COMPANY

PORTFOLIO LEVEL

THE RESEARCH FOCUSES ON
THE PROJECT LEVEL BASED ON
ENVISION®

- **How do the global/national and company levels translate to the project level?**
- **Can the global and company level criteria be used to assess climate action at the project level?**

Quality Of Life
14 Credits

WELLBEING

- QL1.1 Improve Community Quality of Life
- QL1.2 Enhance Public Health & Safety
- QL1.3 Improve Construction Safety
- QL1.4 Minimize Noise & Vibration
- QL1.5 Minimize Light Pollution
- QL1.6 Minimize Construction Impacts

MOBILITY

- QL2.1 Improve Community Mobility & Access
- QL2.2 Encourage Sustainable Transportation
- QL2.3 Improve Access & Wayfinding

COMMUNITY

- QL2.1 Advance Equity & Social Justice
 - QL2.2 Preserve Historic & Cultural Resources
 - QL2.3 Enhance Views & Local Character
 - QL2.4 Enhance Public Space & Amenities
- QL0.0 Innovate or Exceed Credit Requirements

Leadership
12 Credits

COLLABORATION

- LD1.1 Provide Effective Leadership & Commitment
- LD1.2 Foster Collaboration & Teamwork
- LD1.3 Provide for Stakeholder Involvement
- LD1.4 Pursue Byproduct Synergies

PLANNING

- LD2.1 Establish a Sustainability Management Plan
- LD2.2 Plan for Sustainable Communities
- LD2.3 Plan for Long-Term Monitoring & Maintenance
- LD2.4 Plan for End-of-Life

ECONOMY

- LD3.1 Stimulate Economic Prosperity & Development
 - LD3.2 Develop Local Skills & Capabilities
 - LD3.3 Conduct a Life-Cycle Economic Evaluation
- LD0.0 Innovate or Exceed Credit Requirements

Resource Allocation
14 Credits

MATERIALS

- RA1.1 Support Sustainable Procurement Practices
- RA1.2 Use Recycled Materials
- RA1.3 Reduce Operational Waste
- RA1.4 Reduce Construction Waste
- RA1.5 Balance Earthwork On Site

ENERGY

- RA2.1 Reduce Operational Energy Consumption
- RA2.2 Reduce Construction Energy Consumption
- RA2.3 Use Renewable Energy
- RA2.4 Commission & Monitor Energy Systems

WATER

- RA3.1 Preserve Water Resources
 - RA3.2 Reduce Operational Water Consumption
 - RA3.3 Reduce Construction Water Consumption
 - RA3.4 Monitor Water Systems
- RA0.0 Innovate or Exceed Credit Requirements

Natural World
14 Credits

SITING

- NW1.1 Preserve Sites of High Ecological Value
- NW1.2 Provide Wetland & Surface Water Buffers
- NW1.3 Preserve Prime Farmland
- NW1.4 Preserve Undeveloped Land

CONSERVATION

- NW2.1 Reclaim Brownfields
- NW2.2 Manage Stormwater
- NW2.3 Reduce Pesticide & Fertilizer Impacts
- NW2.4 Protect Surface & Groundwater Quality

ECOLOGY

- NW3.1 Enhance Functional Habitats
 - NW3.2 Enhance Wetland & Surface Water Functions
 - NW3.3 Maintain Floodplain Functions
 - NW3.4 Control Invasive Species
 - NW3.5 Protect Soil Health
- NW0.0 Innovate or Exceed Credit Requirements

Climate and Resilience
10 Credits

EMISSIONS

- CR1.1 Reduce Net Embodied Carbon
- CR1.2 Reduce Greenhouse Gas Emissions
- CR1.3 Reduce Air Pollutant Emissions

RESILIENCE

- CR2.1 Avoid Unsuitable Development
 - CR2.2 Assess Climate Change Vulnerability
 - CR2.3 Evaluate Risk & Resilience
 - CR2.4 Establish Resilience Goals and Strategies
 - CR2.5 Maximize Resilience
 - CR2.6 Improve Infrastructure Integration
- CR0.0 Innovate or Exceed Credit Requirements

each credit depends on criteria to calculate the points to be awarded

The Envision® framework assesses infrastructure project performance in climate change mitigation and adaptation.

Six Envision credits explicitly refer and assess climate change mitigation strategies

Resource Allocation

- RA2.1
- RA2.2
- RA2.3
- RA2.4
- CR1.1
- CR1.2

- Reduce Operational Energy Consumption
- Reduce Construction Energy Consumption
- Use Renewable Energy
- Commission & Monitor Energy Systems
- Reduce Net Embodied Carbon
- Reduce Greenhouse Emissions

Climate and Resilience

Six Envision credits explicitly refer and assess climate change adaptation strategies

Climate and Resilience

- CR2.1
- CR2.2
- CR2.3
- CR2.4
- CR2.5
- CR2.6

- Avoid Unsuitable Development
- Assess Climate Change Vulnerability
- Evaluate Risk & Resilience
- Establish Resilience Goals & Strategies
- Maximize Resilience
- Improve Infrastructure Integration

The literature review, the analysis of TCFD and selected ESG systems identified 'HIGH- PRIORITY CRITERIA' for assessing the company's performance in climate change mitigation & adaptation

1 assessment of transition risks (mitigation)

A. GHG emissions reduction targets & progress against targets (GHG accounting)

- GHG Scope 1 emissions
- GHG Scope 2 emissions
- GHG Scope 3 emissions
- GHG Scope 3 emissions (user)

B. GHG emissions reduction strategies

1. Energy efficiency
2. Electricity decarbonization using renewable energy sources
3. Electrification (replacement of use of fossil fuels with electricity)
4. Carbon capture and sequestration for the hard-to-electrify portions of systems

2 assessment of physical risks (adaptation)

C. Alignment with TCFD recommended disclosures

1. Report risk evaluation process
2. Report risk management process

D. Exposure to climate-related risks

1. service continuity risk
2. physical asset risk
3. resource availability risk
 - water
 - materials
 - land
 - workforce
4. supply chain continuity risk

1 Criteria for assessment of transition risks (mitigation) GHG emissions reduction targets & progress against targets (GHG accounting)

36 of the 63 Envision credits contribute to GHG reductions

CR1.2 Reduce Greenhouse Gas Emissions				

14 of the 63 credits relate to GHG emission reduction strategies

2 Criteria for assessment of physical risks (adaptation)

Alignment with TCFD recommended disclosures for adaptation

TCFD Recommendations and Supporting Recommended Disclosures			ENVISION
STRATEGY	Disclose the actual and potential impacts of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning	a) Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term.	Covered by credits CR2.1-CR2.3
		b) Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning.	
		c) Describe the resilience of the organization’s strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario.	
RISK MANAGEMENT	Disclose how the organization identifies, assesses, and manages climate-related risks	a) Describe the organization’s processes for identifying and assessing climate-related risks.	Covered by CR2.1-CR2.3
		b) Describe the organization’s processes for managing climate-related risks.	Covered by CR2.4- CR2.6
		c) Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management.	Not covered

Envision is **highly aligned** with the TCFD recommendations for physical risk management, however, full alignment requires addressing identified gaps.

Envision includes metrics recommended by TCFD, to assess exposure to:

- physical asset risk
- service continuity risk
- resource availability risk (water, materials, land, workforce)
- supply chain continuity risk

- Gaps:
- Consideration of climate-related scenarios including a Paris-aligned scenario of 2°C or lower
 - Integration of climate risks in overall risk management

2 Criteria for assessment of physical risks (adaptation): Exposure to climate-related risks

1. Service continuity risk
2. Physical asset risk
3. Resource availability risk (water, materials, land, workforce)
4. Supply chain continuity risk

38 of the 63 credits relate to exposure to climate risk

ENVISION CREDITS	CLIMATE PHYSICAL RISKS					
	service continuity	physical asset	resource availability			supply chain continuity

CR2.2 Assess Climate Change Vulnerability						
CR2.3 Evaluate Risk and Resilience						
CR2.4 Establish Resilience Goals and Strategies						
CR2.5 Maximize Resilience						
CR2.6 Improve Infrastructure Integration						

The Envision review highlighted **some additional criteria relevant to the project level** that represent climate-related opportunities

CR2.5 'Maximize Resilience' credit explores project resilience through the 7 core principles (qualities) of resilient systems," as defined by the Rockefeller Foundation's City Resilience Framework

Climate physical opportunities:

Core principles of resilient systems

1. Resource efficient
2. Durable
3. Adaptable
4. Redundant
5. Integrated
6. Reflective
7. Inclusive

3 Criteria for assessment of climate physical opportunities

Core principles of resilient systems

1. Resource efficient (creative use of existing resources)
2. Durable (robust, well constructed)
3. Adaptable (flexible, changeable)
4. Redundant (diverse, fault tolerant)
5. Integrated (diverse systems, institutions, people)
6. Reflective (learning and improving)
7. Inclusive (shared action and responsibilities)

RA3.4 Monitor Water Systems	1	3	6	12	
RA3.3 Reduce Construction Water Consumption	1	3	5	8	

Envision Review

(completed)

Envision review based on identified high-priority criteria for climate action

Linked Envision credits with the criteria for **climate change performance** and highlighted certain credits that address multiple criteria at a time, the 'Envision Priority Credits'

ENVISION REVIEW Priority credits - Gaps and Recommendations

CRITERIA	Risk type	IDENTIFIED GAPS	RECOMMENDATIONS
PERFORMANCE IN MITIGATION	A. GHG emissions reduction targets & progress against targets (GHG accounting) Scope 1 & 2 GHG emissions	Where are construction-related scope 1 & 2 emissions reported?	For RA2.2 credit Request <u>the overall reduction of scope 1&2 emissions during construction</u> result of the implemented strategies
	Scope 1 & 2 GHG emissions	Where are maintenance-related scope 1 & 2 emissions reported?	For LD2.3 credit Request <u>an estimate of the overall reduction of scope 1&2 emissions during the expected minor and major rehabilitation works</u> over the project's estimated service life
	User-related scope 3 emissions	User-related scope 3 emissions are not accounted as part of the Envision assessment.	In credits QL2.1, QL2.2 and QL2.3 Consideration of <u>extending Envision's boundary of assessment to account for end-user's scope 3 emissions</u> , particularly in the case of transportation projects
	User-related scope 3 emissions are also produced during construction & maintenance stages	User-related scope 3 emissions are also produced during construction & maintenance stages	For Credits QL1.6 and LD2.3 Consider if requesting <u>estimations of end-user's scope 3 emissions due to construction works</u> -related closures, detouring, or avoided end-user's scope 3 emissions through accelerated construction duration etc.
PERFORMANCE IN ADAPTATION	B. GHG emissions reduction strategies in credits Energy efficiency	-	Revisit 'targets' in evaluation criteria in <u>credits RA2.1 and RA2.2</u>
	De-carbonization of electricity through use of renewable energy sources	The management of renewables production capacity risk.	RA2.3 credit could <u>account for the risk of renewable energy production and request evidence on risk management</u> such as provision of energy storage solutions.
	Electrification	-	-
	Carbon Capture & storage	Carbon capture & storage	Envision could <u>refer more on carbon removal and request more information on the adopted carbon-removal approaches</u> both for operations and construction.
PERFORMANCE IN ADAPTATION	C. Envision's alignment with TCFD disclosures Risk Evaluation process	Reference to physical risk scenarios and associated time horizon(s) considered.	Envision should <u>request reference to physical risk scenarios</u> for anticipated physical impacts in the project's specific locality in higher or lower temperature limits, as part of climate-related risk evaluation.
	Risk management process	Assessment of how infrastructure companies' processes for identifying, assessing, and managing climate-related risks are integrated into their overall risk management.	<u>guide projects teams to integrate climate change risk into their overall risk management plans</u> , such as Safety and Security management plans or Health and Safety Plans, Risk assessments.
EVIDENCE ON CLIMATE OPPORTUNITIES	E. Core principles of resilient systems 1. Resource efficiency (materials) 2. Durability	Use of substitute materials	In the Resource Allocation category, Envision apart from suggesting recycled-content materials as alternative to the use primary resources should assess the use of innovative resources such as substitute materials
	1. Resource efficiency (materials) 2. Durability 3. Adaptability	Credit LD1.4 'Pursue Byproduct synergies' presents the potential of resource efficiencies; however, circularity can potentially present more opportunities.	Credit LD1.4 could make reference to materials passport as an opportunity for a company to identify the value of its own excess materials and/or identify opportunities in the excess materials of other companies.
	1. Durability	Provide more examples of strategies that contribute to durability quality as guidance for project teams.	Examples of strategies that could be added for increased durability(1)Use of materials with crack healing properties(2)Improved construction quality through increased use of prefabrication, modular assembly, and offsite construction(3)Use of intelligent construction systems (4) Pre-stressed concrete slab technology
	1. Durability	Enhancing durability definition within credit CR2.5 'Maximize Resilience'	Durability also includes resistance to extreme heat waves, increased anti-corrosion protection due to increased flooding.(e.g. materials that withstand extreme weather conditions)

1. Align terms (direct/indirect emissions and embodied carbon) **with the GHG protocol classification Scope 1, 2, and 3 GHG emissions**
2. Envision could request evidence on commitment to GHG emissions targets that are in line with the goals of the Paris Agreement (well below 2°C and 1.5°C) and net-zero emissions before 2050
3. Incorporate **transition risk as part of climate-related risk** assessment and management, along with physical risk
4. **Consider TCFD suggestions for use of various transition and physical scenario analysis** for an appropriate evaluation of the climate-related impacts in a project
5. **Revisit ‘targets’ in evaluation criteria in credits RA2.1, RA2.2 & RA2.3** for operational & construction energy consumption, percentage of renewables
6. **Update examples of potential project strategies** to reflect active areas of research, such as **on substitute materials** and technologies to optimize recycled-content material properties, etc.
7. Given the core role of innovation in achieving the aggressive GHG reduction targets –necessary for transition to a low-carbon paradigm–**should Envision incorporate innovation in its guidance and requirements within relevant credits** (in Resource Allocation and Climate & Resilience) to underline their significance and **not as ‘bonus points’ in innovation credits?**

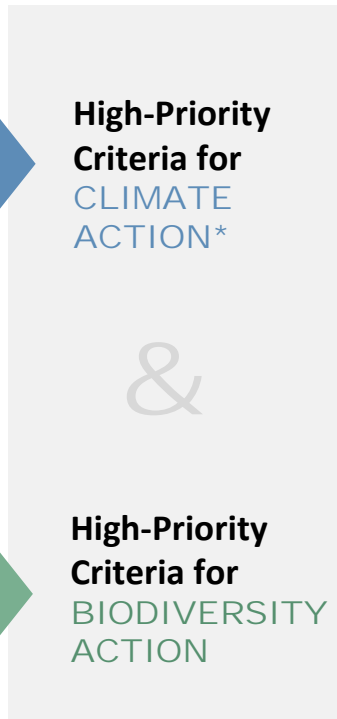

Climate – Biodiversity Nexus

Climate Change

1. Literature review
2. Analysis of ESG (Environmental, Social & Governance) reporting
3. Analysis of TCFD (Task Force on Climate-related Financial Disclosures)

Climate – Biodiversity

1. Literature review
2. Analysis of Ecosystem service-based assessment and accounting frameworks and their classification systems
3. Analysis of ESG and TNFD (Taskforce on Nature-related Financial Disclosures)

* Based on the literature review, the analysis of TCFD and selected ESG systems

Envision Review

The high-priority criteria for integrated climate change & biodiversity action are used for a review of Envision to identify Envision priority credits and identify gaps

Use of Case Studies

The high-priority criteria for integrated climate change & biodiversity action are applied and tested on selected Envision verified projects to assess the project performance on climate & biodiversity

For a complete assessment of projects' climate change performance high priority criteria should:

- **integrate biodiversity performance**
- **enable assessment of performance of Nature-based solutions, that a growing literature supports that should be ecosystem service-based**

Climate change and biodiversity loss are two interlinked crises

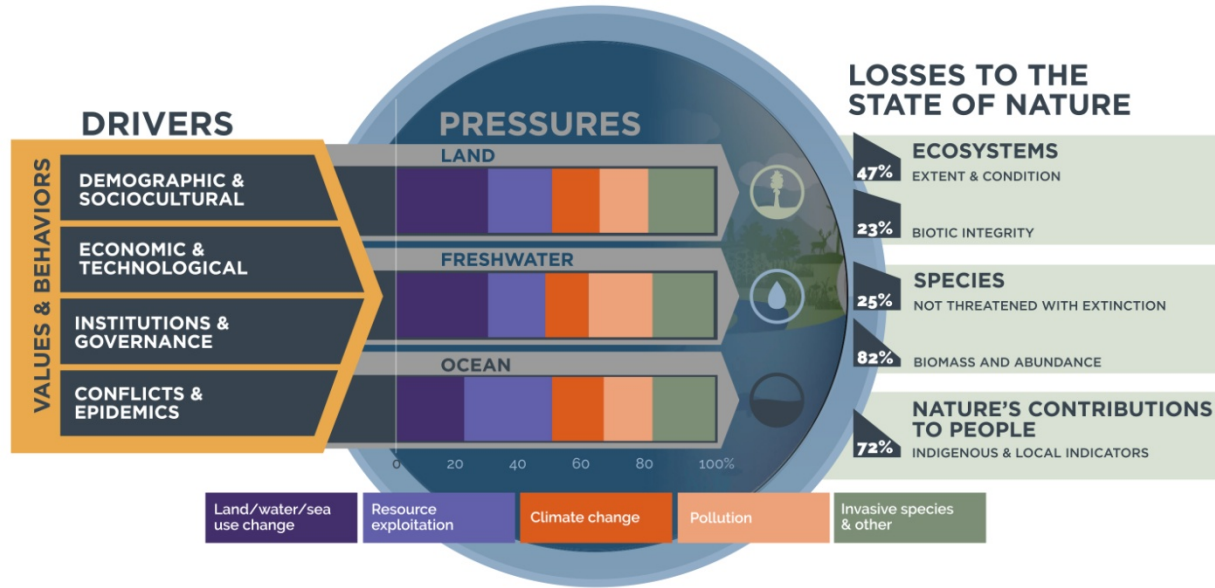

The impacts of extreme weather events and biodiversity loss are now second and third behind climate change as the most severe risks identified by global executives for the next decade.

” WEF (2022) Global Risks Report 2022

“We cannot mitigate – and adapt to – the adverse impacts of climate change without investing in nature’s capacity to store carbon and support resilient societies.”

” Taskforce for Nature-related Financial Disclosures (TNFD)

The urgency to halt and reverse biodiversity loss is gaining global momentum due to emerging evidence pointing out **unprecedented and accelerating biodiversity loss on a worldwide scale.**

Source: IPBES. (2019): Summary for policymakers of the global assessment report on biodiversity and ecosystem services of the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services.

Moreover, biodiversity and healthy ecosystems are the foundation for economies, societies and quality of life. Reversing biodiversity decline is needed for achieving the SDGs.

Source: Stockholm Resilience Centre, Stockholm University

“Without adequate measures to conserve biodiversity and sustainably use its components the 2030 Agenda for Sustainable Development will not be achievable.”

” CBD, UN FAO, WB, UNEP, UNDP. (2016). “Biodiversity and the 2030 Agenda for Sustainable Development: Technical Note.”

Call for integrated climate-biodiversity action

“There is no climate solution without the full contribution of nature.”

“Nature can provide **about one-third of the** mitigation to meet the goal of the Paris climate agreement.”

Campaign for Nature.
“COP26: A Chance to Address the Interconnected Crises of Climate Change and Biodiversity Loss”

“Without urgent action to halt and reverse biodiversity loss, reductions in GHG emissions to limit warming to close to 1.5°C or even 2°C will not be achieved.”

IPBES and IPCC. (June 2021).
“Scientific outcome of the IPBES- IPCC co-sponsored workshop on biodiversity and climate change.”

The recent COP 15 for biodiversity and COP 26 for climate pursued a pairing of nature-positive targets and Paris agreement targets and recognized the need for an integrated approach for addressing climate change & biodiversity loss.

“There is no climate solution without the full contribution of nature.”

GLOBAL LEVEL

“Nature-based Solutions (NbS) are recognized for their significant potential to generate climate-biodiversity co-benefits.”

” IPBES and IPCC. (June 2021). “Scientific outcome of the IPBES- IPCC co-sponsored workshop on biodiversity and climate change.”

“NbS must result in a net gain to biodiversity and ecosystem integrity.”

” IUCN (2020) The IUCN Global Standard for Nature-based Solutions

PROJECT LEVEL

Definitions :

Natural climate solutions

A subset of nature-based solutions, natural-climate solutions include conservation, restoration, and improved land and sea management that increase carbon storage and/or avoid greenhouse gas emissions, enhance resilience and assist climate adaptation across global forests, wetlands, mangroves, grasslands, and agricultural lands and other habitats.

” TNFD Glossary

The CBD Draft Post-2020 Global Biodiversity Framework comprises 21 targets and 10 milestones proposed for 2030, en route to the 'living in harmony with nature' goal by 2050.

The framework includes targets for 2030 that among others call for:

- **Conserve at least 30% globally of land areas and sea areas**, especially areas of particular importance for biodiversity and its contributions to people
- Prevent or reduce the rate of introducing invasive alien species by 50% and control or eradicate such species to eliminate or minimize their impacts.
- Reduce nutrients pollution by at least half, pesticides by two-thirds, and eliminate plastic waste.
- **Use ecosystem-based approaches to mitigate and adapt to climate change**, contributing at least 10 GtCO₂e per year to mitigation, and ensure that all mitigation and adaptation efforts avoid negative impacts on biodiversity

The post-2020 framework reflects emerging calls for global nature positive targets, initially to achieve 'no net loss' by 2030 and eventually 'net biodiversity gain' by 2050.

Taskforce on Nature-related Financial Disclosures

1st draft Framework was released mid- March 2022
The TNFD Recommendations are due to be published by 2023.

The Taskforce on Nature-related Financial Disclosures (TNFD) was formed in July 2020 to **streamline** the data, metrics and methodology for reporting nature-related performance.

TNFD’s mission is to develop a risk management and disclosure framework for organizations to report and act on evolving nature-related risks for a shift toward **nature-positive outcomes**.

The TNFD framework seeks to align with the CBD global targets of **no net nature loss by 2030 and net gain by 2050**.

” TNFD. (June 2021).
“Proposed Technical Scope Recommendations for the TNFD”

Climate Change

Biodiversity

Global scale issues integral to sustainable development recognized as crises

An issue of global attention as a top global threat

Awareness of biodiversity loss as a threat is gaining global momentum; recognized as one of top global threats.

International Conventions & COPs

United Nations Framework Convention on Climate Change

Convention on Biological Diversity / CBD secretariat under UNEP

Intergovernmental panels which assesses available knowledge

Inter-governmental Panel on Climate Change

Inter- governmental Science-Policy Platform on Biodiversity & Ecosystem Services

Development of national plans under commitment to Convention agreements

Nationally Determined Contributions (NDCs) and long-term strategies (LTS)

National Biodiversity Strategies and Action Plans (NBSAPs)

Time-bound goals: 2030 a critical year

Limit global warming to 1.5° C by 2030
Net zero emissions by 2050 for climate action

Nature positive by 2030 to halt and reverse biodiversity loss
'living in harmony with nature' by 2050

Integration in ESG Reporting

Fully-integrated in all ESG standards

On-going update of ESG systems' biodiversity-related disclosures

Taskforces established to develop guidance for businesses

Taskforce on Nature-related Financial Disclosures

Climate Change

Indicators / Metrics

GHG emissions are used as a universally agreed indicator, a meaningful metric to demonstrate exposure to risks.

Biodiversity

- standardized indicators do not exist yet.
- location-specific data from corporations will be required.
- difficult to select a shortlist of useful and feasible indicators to monitor everywhere.

A common comment is the challenge of measuring biodiversity as compared to climate change.

“When it comes to data, metrics and methodologies, there are critical differences between climate and nature. Unlike climate, it is not just your activities that matter but also where the activities are.”

Craig, D. (September 2021). “Expanding the E in ESG”

“All companies impact and depend on biodiversity.”

CDSB. (2021).
Application guidance
for biodiversity- related
disclosures. Draft for
consultation.

Impacts

Changes in the state of nature, as a result of an organization’s activities, which may result in changes to the capacity of nature to provide social and economic functions. Impacts can be positive or negative, direct, indirect or cumulative and can result from both direct operations and value chain activities.

Dependencies

The **ecosystem services** that an organization or other actor **relies on** to function, such as a clean and regular water supply. Dependencies are interlinked with biodiversity impacts.

TNFD. (March 2022). “The
TNFD Nature-related Risk
& Opportunity Management
and Disclosure Framework”
Beta v0.1 release.

The analysis of existing and recently developed ESG & nature-related frameworks & guidelines identified that Biodiversity-related reporting includes indicators for:

Pressures (impact drivers) on biodiversity

- Change in state of biodiversity
- Species
- Ecosystems
- Ecosystem Services (available for companies)

Dependencies on biodiversity / benefits from biodiversity (Ecosystem Services used by companies)

- Biodiversity management responses
- No net loss
- Net gain

Recent additions of indicators

Recent addition the alignment with CBD Post-2020 Targets for 2030 & 2050

CLIMATE DISCLOSURE STANDARDS BOARD

GLOBAL REPORTING INITIATIVE

GLOBAL REAL ESTATE SUSTAINABILITY BENCHMARK

SCIENCE BASED TARGETS NETWORK

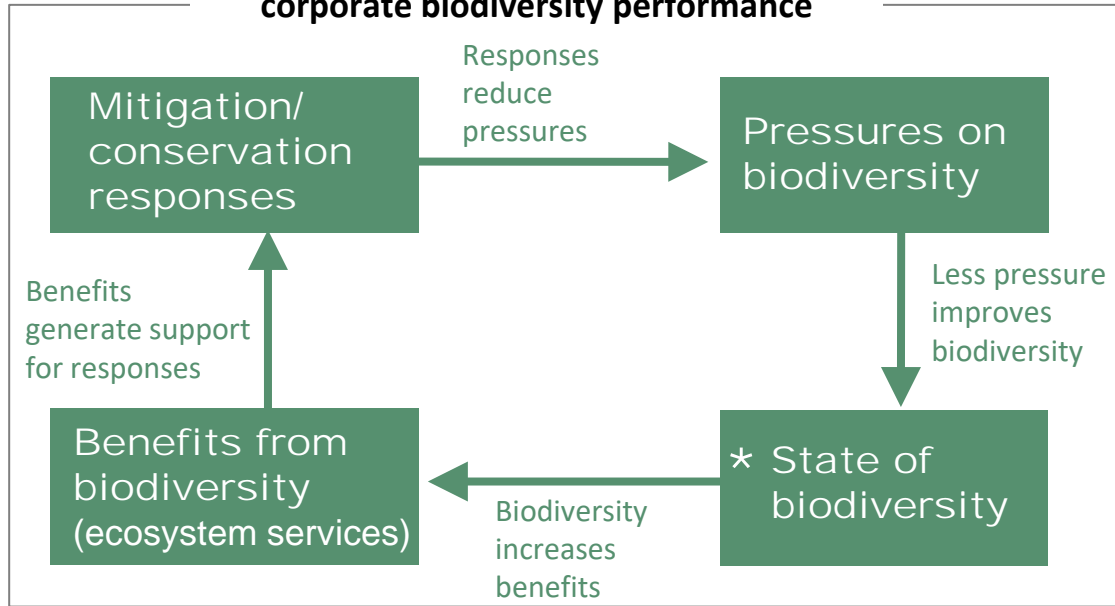

TASKFORCE FOR NATURE-RELATED FINANCIAL DISCLOSURES

INTERNATIONAL UNION FOR CONSERVATION OF NATURE

The categories of indicators are interlinked. The International Union for Conservation of Nature (IUCN) illustrates the links between pressures – state of biodiversity- benefits – responses

IUCN’s framework of linked indicators for corporate biodiversity performance

Source: IUCN Guidelines for corporate biodiversity performance

* According to IUCN an advantage of the linked indicator framework is that “given that **state of biodiversity indicators** generally change slowly and companies may not be able to demonstrate improvements, **pressure and response indicators can demonstrate change and progress** and can help companies verify or their selection of strategies.

The Envision® framework **assesses infrastructure project performance in biodiversity.**

Thirteen Envision credits **explicitly refer and assess biodiversity-related strategies**

Natural World

- NW1.1 Preserve Sites of High Ecological Value
- NW1.2 Provide Wetland & Surface Water Buffers
- NW1.3 Preserve Prime Farmland
- NW1.4 Preserve Undeveloped Land
- NW2.1 Reclaim Brownfields
- NW2.2 Manage Stormwater
- NW2.3 Reduce Pesticide & Fertilizer Impacts
- NW2.4 Protect Surface & Groundwater Quality
- NW3.1 Enhance Functional Habitats
- NW3.2 Enhance Wetland & Surface Water Functions
- NW3.3 Maintain Floodplain Functions
- NW3.4 Control Invasive Species
- NW3.5 Protect Soil Health

'HIGH- PRIORITY CRITERIA' for assessing the company's biodiversity (climate-relevant) performance

1 assessment of Pressures on Biodiversity

- A. Land, freshwater, sea change
- B. Resource exploitation
- C. Pollution
 - Water
 - Air
 - Soil
 - Waste
 - Noise
 - Light
- D. Climate change
- E. Introduction of invasive species

Based on IPBES drivers of biodiversity change

2 assessment of the State of Biodiversity

- A. Species
- B. Ecosystems
- C. Ecosystem Services (climate change-relevant services available for project and/or community)

Based on UN SEEA ecosystem services reference list

3 assessment of Dependencies on Biodiversity (benefits from biodiversity)

Ecosystem services (climate change-relevant services used by project)

Based on UN SEEA ecosystem services reference list

4 assessment of Biodiversity Management Responses

- A. No net loss
 - Avoid
 - Minimize
 - Restore
 - Offset off-site
- B. Net biodiversity gain
 - Offset on-site (like for like or better)
 - Renew

Based on the "Mitigation and Conservation Hierarchy"

All criteria apply for a project's full lifecycle and additional location- and activity-specific information is required to complete the assessment.

1 Criteria for assessment of pressures on biodiversity

- Land, freshwater, sea change
- **Resource exploitation***
- Pollution
- **Climate change***
- Introduction of invasive species

ENVISION CREDITS	PRESSURES ON BIODIVERSITY											
	LAND, FRESHWATER, SEA CHANGE			RESOURCE EXPLOITATION	POLLUTION					CLIMATE CHANGE	INTRODUCTION OF INVASIVE SPECIES

☐ Credits that can potentially address criteria

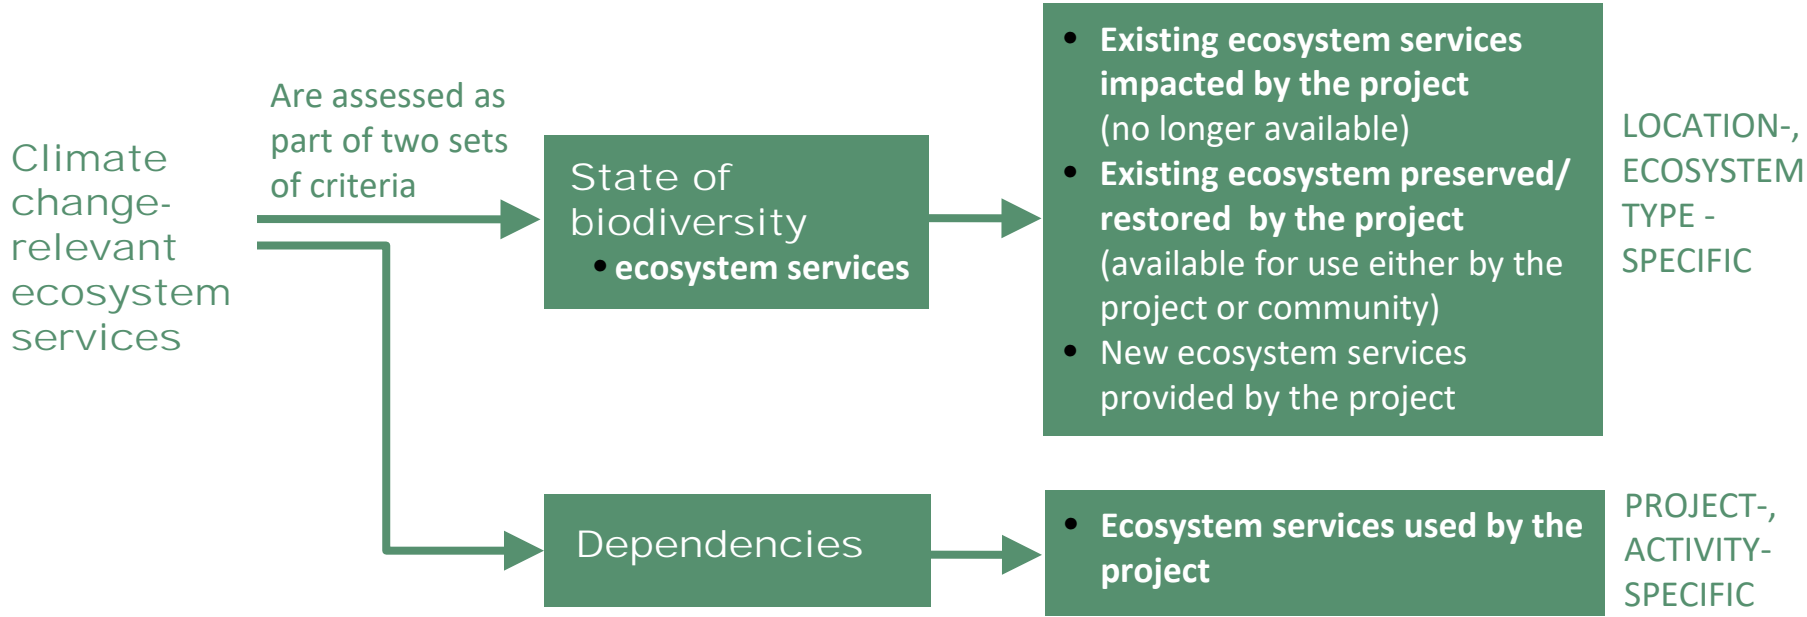

After the review of six established ecosystem services classification systems the UN System of Environmental Economic Accounting's (SEEA) Ecosystem Accounting (EA) was selected for the Envision review.

UN SEEA-EA REFERENCE LIST OF ECOSYSTEM SERVICES (climate change-relevant services)

REGULATING AND MAINTENANCE SERVICES	Global climate regulation		
	Rainfall pattern regulation (at sub-continental scale)		
	Local (micro and meso) climate regulation		
	Air filtration		
	Soil quality regulation		
	Soil and sediment retention	Soil erosion control Landslide mitigation	
	Solid waste remediation		
	Water purification (water quality amelioration)	Retention and breakdown of nutrients Retention and breakdown of other pollutants	
	Water flow regulation	Baseline flow maintenance Peak flow mitigation	
	Flood mitigation	Coastal protection River flood mitigation	
	Storm mitigation		
	Noise attenuation		
	Pollination		
	Biological control	Pest control Disease control	
	Nursery population and habitat maintenance		
	PROVISIONING SERVICES	Biomass provisioning	Crop provisioning (energy crops) Wood provisioning
		Water supply	

It is worth noting that UN SEEA classification is also used by the TNFD as the reference list for ecosystem services

Ecosystem services are included and assessed through two sets of **BIODIVERSITY HIGH-PRIORITY CRITERIA**
This is not an overlap between the criteria as ecosystem services are distinguished as shown below:

Review of Envision based on the assessment of ecosystem services (climate- & infrastructure-project-relevant ecosystem services). Envision is examined against an established Ecosystem Services classification system to identify:

- Which ecosystem services are captured by Envision?
- Which ecosystem services are infrastructure project-relevant? And which climate-relevant?
- Which credits implicitly refer to ecosystem services as project dependencies?
- If the performance assessment of NbS could be enhanced based on ecosystem services

“An ecosystem services classification can operate as a checklist.”

SEEA Experimental
Ecosystem Accounting:
Towards a definition and
classification of ecosystem
services for SEEA.
September 2018

2 Criteria for assessment of the state of biodiversity

- Species
- Ecosystems
- Ecosystem services (climate change-relevant services available for project and/or community)

FROM GLOBAL TO PROJECT LEVEL RESPONSE

Responses seek alignment with global nature positive targets requires initially achieving 'no net loss' of biodiversity and eventually 'net gain'.

No net loss & Net biodiversity gain targets at the project level can be achieved through Mitigation hierarchy

Source: RPS group

The mitigation hierarchy is a well-established and widely used approach **at the project level**, as part of Environmental Impact Assessments (EIAs) and is at the core of the Envision approach.

“The new global goals on introduce the need to explore what implementing the mitigation hierarchy means at all scales: national, regional, project, and company.

” Stevenson, M. Weber, C. (April 2020). “WWF Discussion paper: Mitigation hierarchies.”

4 Criteria for assessment of biodiversity management responses (no net loss/ net gain)

Based on a combination of the Mitigation and Conservation Hierarchy

ENVISION CREDITS	NO NET BIODIVERSITY LOSS			BIODIVERSITY NET GAIN		
	AVOID	MINIMIZE	RESTORE	OFFSET		RENEW

Use of Case studies

Use of Envision® verified projects as case studies

Links specific project strategies with high-priority criteria and provides examples of how these criteria can be met at a project level

Nine Envision Platinum- & Gold-award projects studied

Nine projects are studied based on the HIGH-PRIORITY CRITERIA for climate and biodiversity action:

California High-Speed Rail Program (Phase I)
Sacramento, CA

Hyperion Wastewater Reclamation Plant's Digester Gas Utilization Project
Los Angeles, CA

Upland Prairie Wind farm
Everly, IA

Berryessa Transit Center
San Jose, CA

Dubuque Solar farm
Dubuque, IA

Santa Monica Clean Beaches Project
Santa Monica, CA

Gordie Howe International Bridge
Detroit, MI

English Farms Wind farm
Montezuma, IA

Georgetown Wet Weather Treatment Station
Seattle, WA

Integrated Climate-Biodiversity action

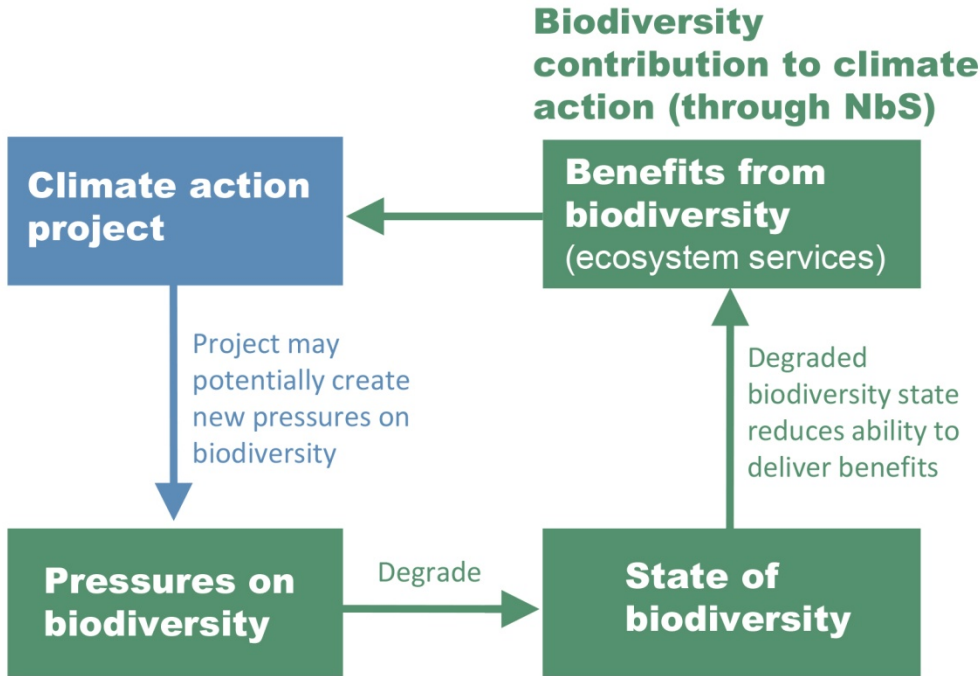

High-priority criteria for managing risks and leveraging opportunities of climate change action

The Core principles of resilient systems are recognized as climate-related opportunities due to their joint benefit for both climate mitigation and adaptation

Opportunity = the joint benefit for climate mitigation and adaptation

OVERALL SYNTHESIS Defining integrated climate-biodiversity project performance

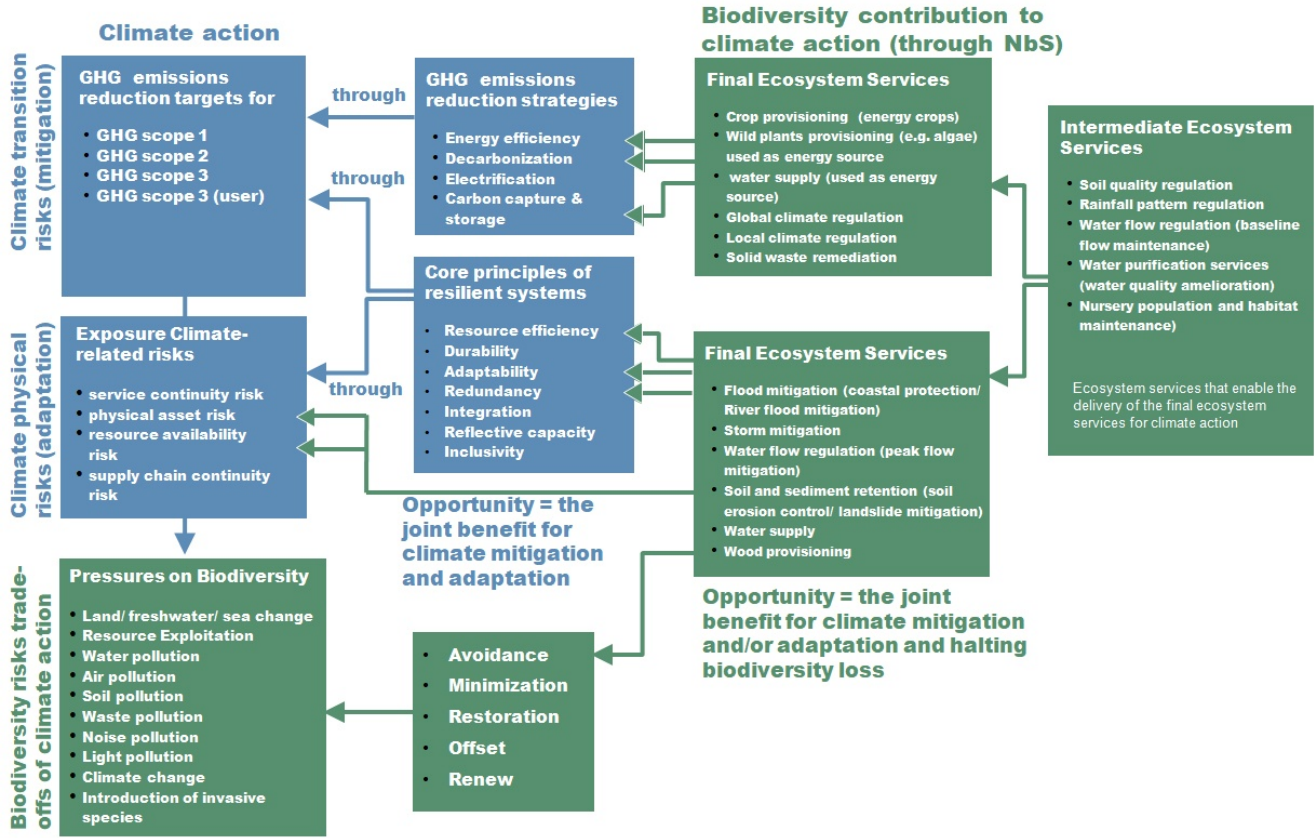

Reduced ability to deliver biodiversity benefits undermines biodiversity’s potential contribution to climate action.

This risk is managed through the biodiversity management responses: avoidance, minimization, restoration, offset, renew. Therefore, for demonstrating integrated climate-biodiversity action, a climate action project **should incorporate NbS and at the same time, or as a minimum manage all potential project-driven pressures** to ensure the long-term delivery of ecosystem services.

OVERALL SYNTHESIS Integrated climate-biodiversity project performance

which climate change-related criteria can be addressed by biodiversity

Two types of opportunities emerge:

- The core principles of resilient systems (or climate physical opportunities)
- the NbS solutions

They are opportunities because, the former has a joint benefit for both climate change mitigation and adaptation and the latter because of its joint benefit for climate mitigation and /or adaptation and halting biodiversity loss.

OVERALL SYNTHESIS Integrated climate-biodiversity project performance

Incorporation of NbS

Management of pressures on biodiversity

GHG EMISSIONS REDUCTION TARGETS FOR:		GHG EMISSIONS REDUCTION STRATEGIES & CORE PRINCIPLES OF RESILIENT SYSTEMS		FINAL ECOSYSTEM SERVICES (FES)	INTERMEDIATE ECOSYSTEM SERVICES (that support the delivery of final ES)
CLIMATE TRANSITION RISKS [MITIGATION]	GHG scope 1 emissions	De-carbonization	Crop provisioning (energy crops)	Soil quality regulation	
			Provisioning of wild plants used as source of energy		
			Water supply (used as energy source)	Rainfall pattern regulation services (at sub-continental scale)	
		Electrification		Water flow regulation (Baseline flow maintenance)	
	GHG scope 2 emissions	Carbon capture & storage	Global climate regulation	Nursery population and habitat maintenance	
				Water purification services (water quality amelioration)	
	GHG scope 2 emissions	Energy efficiency	Local climate regulation	Soil quality regulation	
	GHG scope 3 emissions	Resource efficiency (materials) (reuse/downsizing)	Solid waste remediation		
			Local climate regulation		
		Durability			
Inclusivity					
GHG scope 3 emissions (user)	De-carbonization				
	Energy efficiency	Local climate regulation			
CLIMATE PHYSICAL RISKS [ADAPTATION]	Service continuity risk	Adaptability			
		Redundancy			
		Reflective capacity			
	Physical asset risk	Durability	Local (micro and meso) climate regulation		
		Adaptability	Storm mitigation (other than water-related events)		
		Redundancy			
			Flood mitigation (Coastal protection /River flood mitigation)		
			Water flow regulation (Peak flow mitigation)		
	Resource availability risk (for future long-term needs)	water	Resource efficiency (water)	Water supply	
				Rainfall pattern regulation services	
		materials	Resource efficiency (materials) (reuse/downsizing/alternative materials)	Wood provisioning	
				Sand, rock, gravel etc.	
		land	Integration		
	workforce	Integration			
	Supply chain continuity risk	Redundancy			

&

PRESSURES ON BIODIVERSITY	Land, freshwater, sea change			
	Pollution	Water	Water purification (retention and breakdown of nutrients/ other pollutants)	Soil quality regulation
		Air	Air filtration	Nursery population and habitat maintenance
		Soil	Soil quality regulation	
		Waste	Pest control	
		Noise	Solid waste remediation	
	light	Noise attenuation		
	Introduction of invasive species			

OVERALL SYNTHESIS

Examples of integrated climate-biodiversity action as a minimum

Types of climate change strategies that minimize adverse impacts on biodiversity across the project lifecycle

	Climate change-related	Biodiversity -related
Project Useful Life Extension	<p>These strategies through durability, redundancy, construction quality contribute to climate change mitigation by:</p> <ul style="list-style-type: none"> - Reducing future rehabilitation works or replacement and the associated scope 1 & 2 emissions - reducing scope 3 upstream emissions associated with materials in the case of early failure of the project - reducing scope 3 downstream emissions associated with waste landfilling and hauling 	<p>These strategies reduce upstream pressures on biodiversity such as:</p> <ul style="list-style-type: none"> - resource exploitation (materials) - land change for extraction, <p>as well as downstream pressures on biodiversity such as:</p> <ul style="list-style-type: none"> - waste pollution - land change for landfills, - potential water pollution from landfill
Material sourcing from sustainable practice suppliers	<p>These strategies contribute to climate change mitigation by reducing scope 3 upstream emissions associated with materials</p>	<p>These strategies reduce various upstream pressures on biodiversity depending on the supplier's type of activity, sustainability management system etc.</p>
Reduction of material input	<p>These strategies contribute to climate change mitigation by reducing scope 3 upstream emissions associated with materials and to climate change adaptation by securing resource availability for future project needs as well as for other projects needs</p>	<p>These strategies reduce upstream pressures on biodiversity such as:</p> <ul style="list-style-type: none"> - resource exploitation (materials) - land change for extraction
End-of-Life repurposing	<p>These strategies contribute to climate change mitigation by reducing scope 3 downstream emissions associated with waste landfilling and hauling, as well as future upstream emissions associated with materials for other projects</p>	<p>these strategies reduce downstream pressures on biodiversity such as:</p> <ul style="list-style-type: none"> - waste pollution - land change for landfills, - potential water pollution from landfill - resource exploitation (materials and water) for new material production for other projects
Solid waste diversion	<p>These strategies contribute to climate change mitigation by reducing scope 3 downstream emissions associated with waste landfilling and hauling</p>	
Reduction of potable water use	<p>These strategies contribute to climate change adaptation by preserving water efficiency and water resource availability in the long-term</p>	<p>these strategies reduce water resource exploitation during project operation</p>
Stormwater and flood control	<p>These strategies contribute to climate change adaptation by control and capturing stormwater runoff and in the case of DGUP project treating and repurposing 100% of stormwater to eliminate potable water input needs.</p>	<p>Strategies that contribute to 'Avoidance of water pollution'</p>
Purchase of carbon offsets	<p>These strategies contribute to climate change mitigation through conservation of carbon-rich ecosystems that sequester and store carbon emissions.</p>
